

Status of Coquí Mo-99 Medical Isotope Production Facility

Ms. Blair Everett, Mr. Alejandro Valderrabano, Mrs. Carmen I. Bigles
Coquí Radio Pharmaceutical Corp
1172 South Dixie Hwy., Suite 335
Coral Gables, FL USA

Coquí Radio Pharmaceutical Corp (Coquí) has the goal of establishing a medical isotope production facility (MIPF) for securing a continuous domestic supply of the radioisotope Molybdenum-99 for U.S. citizens.

Coquí identified a 25 acre site adjacent to an existing industrial park in northern central Florida and is in the process of developing licensing documents related to the facility. An environmental report that meets the requirements of the interim staff guidance augmenting NUREG-1537 is currently being prepared. Development of the preliminary safety analysis report will be underway in the near future as part of the construction permit application.

Preliminary community reaction to the proposed development has been positive and, to date, field work performed at the site supports its potential suitability for a MIPF. Coquí anticipates an operational facility by 2017.
