DOE Support for Mo-99 Production in the United States

Randy Howell
DOE/NNSA
1000 Independence Ave, Washington DC 20585 – USA

ABSTRACT

The Department of Energy's Mo-99 Program implements the mandate of the American Medical Isotope Production Act of 2012 to support commercial projects for the production of molybdenum-99 in the United States without the use of highly enriched uranium. The Program provides financial and technical support to multiple partners for the development of their projects, which each use a different technical approach to Mo-99 production. This presentation will summarize Program activities and updates since the last Mo-99 Topical Meeting.
